PROFESSIONAL SUMMARY

14+ years of experience. Specialized in Flutter since 2020. Built high-complexity products across fintech and banking, such as, Digital Wallet, PIX and Credit Cards, to millions of users. Hands-on and collaborative: I architect and design requirements, backlogs and roadmaps with cross-squad governance, drive the adoption of new technologies and step up as tech lead when the team is in need. Focused on measurable impact and team performance.

PROFESSIONAL EXPERIENCE

Spread Tecnologia

Senior Flutter Developer

Sao Paulo, Brazil - June 2025 - June 2026

- Building digital banking products (Digital Wallet, PIX, Credit Cards) for millions of users in a 150+ module Flutter project.
- Design System governance — tokens, component catalog, and cross-squad documentation for approximately 200 professionals.
- Implementing accessibility (WCAG) with semantics and screen-reader support across the full component library.
- Driving TDD culture with unit, integration, and Maestro automation tests covering critical user journeys.
- Developed a front-end library acting as an API contract for dynamic screen/form generation, eliminating routing bugs and cross-module dependencies.
- Building custom AI skills and prompts to accelerate development workflows, code review, code quality and expanding testing coverage.
- Technical interviewing and mentoring for new hires.
- Clean Architecture, REST API integration, state management with BLoC, Cubit and ValueNotifier, RemoteConfig, Observability with DataDog and Google Analytics, GitFlow, dependency injection with getIt, deep links, GoRouter.

Digio

Senior Flutter Developer

Barueri, Brazil - March 2024 - February 2025

- Transformed a Flutter Web monolith with zero test coverage and duplicated, stale modules into a modularized, testable system.
- Hero metric: 0 → 70%+ test coverage with TDD adoption across the squad.
- Led technical refinement and became the bridge between engineering, product, UX, and QA.
- Implemented feature toggles and remote config within Firebase for real-time update of parameters without redeployment.
- Built and documented a standardized Design System with Widgetbook.
- Turnaround: squad went from chronically delayed to shipping ahead of schedule with idle front-end capacity. Cross-team relationships (UX, product, QA) measurably improved.
- Clean Architecture, REST API integration, state management with Provider and Riverpod, RemoteConfig, Observability with DataDog and Google Analytics, GitFlow, dependency injection with getIt, GoRouter.

Mobyan
Senior Mobile Developer

Barueri, Brazil - May 2023 - March 2024

- Built and maintained Flutter and Kotlin apps for field-service payment equipment (POS) maintenance.
- Implemented CI/CD pipelines (Azure DevOps, Firebase) for automated staging and production deployments to Play Store.
- Architected offline-first mobile solution with local persistence and background sync using local databases SQLite and Hive (NoSQL) and Isolates — eliminated data loss.
- Use of Platform Channels (Method Channel, Event Channel) for integration with native resources like Google Maps, GPS, Camera, biometrics and in-app updates.
- Security with secure storage, device integrity, OAuth2 (JWT, refresh token).
- Performance profiling with DevTools, Performance Overlay, Logcat.
- Hero metric: R$ 300K+ annual savings by replacing a complex form + high-turnover call center with a streamlined in-app form.
- Adoption: 2,000+ field technicians successfully transitioned to the new app.
- Native Android (Kotlin) maintenance on a Room-based checklist tool.
- Clean Architecture, REST API integration, state management with Provider and GetX, Firebase (RemoteConfig, App Distribution, Crashlytics), GitFlow, dependency injection with getIt.

Bitz
Mid-level Mobile Developer

Sao Paulo, Brazil - August 2022 - April 2023

- Mobile Flutter development (Android/iOS) with Clean Architecture, TDD and GitFlow. Multidisciplinary squads, Agile, Scrum.
- Delivered the loans product on schedule despite the business and external backend issues that impacted the project up to launch day
- Migrated Voucher and Pix modules to Flutter (2 modules, ~30 screens)
- Built the Bytes library, Bitz's Design System
- Pipelines with GitHub Actions.
- Unit and integration tests.
- REST API integration, state management with BloC and Cubit, Firebase (RemoteConfig, Crashlytics), Observability with Google Analytics, dependency injection with getIt.

EARLIER EXPERIENCE

Oruspay - Full Stack Developer (Angular, Flutter, Java/Spring, AWS) · Jul 2016 - Aug 2022
Porto Seguro - MIS Analyst (dashboards, reports and scripts) · Aug 2014 - Sep 2015
Universidade Federal do ABC - IT Intern · Oct 2012 - Dec 2013

EDUCATION

Postgraduate in Systems Architecture - FIAP, 2025 - 2026
Postgraduate in AI & Machine Learning - PUC-MG, 2023 - 2024
Associate Degree in Game Development - FATEC São Caetano do Sul, 2010 - 2013

LANGUAGES

English: C2 Advanced - EF SET English Certificate 86/100 (C2 Proficient), 2023.
Portuguese: Fluent / Native.

CERTIFICATIONS

Kotlin Training - Alura, 2024 - 2025
Flutter Training - Alura, 2021
Java Academy - Caelum, 2019 - 2020
Android Development - Impacta, 2018

TECHNICAL SKILLS & TOOLS

Mobile: Flutter, Dart, Kotlin.
Web: Flutter, Angular, HTML5, CSS, JavaScript.
Backend: Java, Spring.
Testing: Unit, widget and integration testing; Mockito, JUnit, WebDriver, Maestro
Architecture: Clean Architecture, TDD, SOLID, MVC, MVVM, BDD, KISS, BFF, Firebase, GitHub, GitFlow
Databases: SQL, Postgres, NoSQL.
CI/CD: Azure DevOps, Fastlane, GitHub Actions.
Design: Figma, Design Systems, Widgetbook.
Infra: AWS, Docker, Kubernetes, S3, Cognito, SQS, API Gateway.
AI: Claude, Codex, DeepSeek, MCP; AI agents and automated development with skills and custom prompts.
